Luca Romano

Master’s graduate in Computer Science and Engineering (Business Informatics, Analytics & Intelligence) from Politecnico di Milano, with a focus on data engineering, data analysis, data management, and quantitative methods. I have a strong interest in the application of data to the world of football and have developed a Master's thesis on the critical analysis of the Expected Goals (xG) metric and the creation of event-based metrics for performance evaluation. I am interested in analyzing and transforming complex data into clear and useful insights to support technical and tactical decisions.

Education

Master's Degree, Politecnico di Milano (104/110)
September 2023 - March 2026

Master’s Degree in **Computer Science and Engineering (Business Informatics - Analytics and Intelligence). Main courses:** Machine Learning, Data Mining, Streaming Data Analytics, Model Identification and Data Analysis, Performance Evaluation and Application, Data and Information Quality, Data Bases, and Systems and Methods for Big and Unstructured Data.
Experimental Master’s Thesis: "A Critical Analysis of the xG (expected goals) Metric in Professional Soccer," which allowed me to develop analysis pipelines for football data, skills in feature engineering and quantitative model validation, as well as the ability to produce effective visualizations (charts, heatmaps, and comparative analyses) to transform results into interpretable and useful insights for the decision-making process.

Bachelor's Degree, Politecnico di Milano
September 2019 - July 2023

Courses

IELTS, Cambridge (7.5)
March 2019

Hobbies

Football, which I have always followed with great passion and with an approach increasingly focused on technical-tactical and data analysis. I am interested in exploring the connection between game dynamics, performance, and advanced metrics, combining match observation with quantitative interpretation. Over time, I have developed this interest through personal study and football analytics projects.

Other hobbies: sports, music, and video games.
